Potential competing interests: No potential competing interests to declare.

In the abstract, a brief description is needed because the author raises the theme of Pela Gadong Culture. The supporting main theory is also necessary because the writers haven't give supporting theory. The method used in analyzing the data is also not given along with the general research results at the end. In the abstract, the writers only give a definition which should be a specific discussion in the introduction.

Technical writing and research questions should be considered because this writing is scientific writing. There are massive errors in writing and grammatical errors found in the article.

In terms of content, this paper is a review. It is better if there will be more in-depth research from Pela Gadong given in a more specific scope and associated with elements of cultural research discussion and deeper or unique discussions to increase the reader's knowledge. Consistency regarding Pela Gadong Culture and the initial detailed discussion must be considered so that the discussion does not spread too far into other discussions.
