

# Review of: "Giardia lamblia infection And Associated Risk Factors Among Patients Who Are Seeking Stool Examination At Bule Hora University Teaching Hospital, West Guji Zone, Ethiopia"

Asma Qureshi

Potential competing interests: No potential competing interests to declare.

The article is presenting Giardia lamblia infection and associated risks in Ethiopia. The study is based on data only from one hospital. It includes only those patients who come for stool examination. This cannot present the actual prevalence of Giardia in the population. Overall, the study design is good, but more hospital data should be included. The article is well written. The methodology is good regarding sociodemographic and health-related factors. Despite some limitations, I recommend this paper for publication.
