Dear editors,

This manuscript was aimed 1) to evaluate the associations of outcomes of physical exercise and alcohol conditions with poor health among cancer patients when controlling socioeconomic factors and 2) to evaluate the joint effects of multiple cancers in the association of sleep hours, physical exercise, and alcohol conditions with poor health among cancer patients. In this context, it is a good compilation study that guides the multidisciplinary treatment of cancer patients.

The article complies with the general academic writing framework.

Tables and graphs are directly relevant and appropriate to the results.

Acceptance and publication of the article will contribute to the literature.
