Dear Authors,

I read the manuscript entitled: "Influence of Allergy, Asthma Treatment (AT) and Eviction Diet(ED) on Sleep-Disordered Breathing(SDB) in Pediatric Asthma Associated With Osa, Increased Respiratory Effort(RE) During Sleep and Overweight/Obesity: a Study in 78 Children" with great interest since, as authors pointed out, the link between asthma, its therapy and SDB are still not well studied.

However, I do have come across some issues, while reading, hope the authors could address them:

1. I believe that at the beginning of the introduction should be avoided considerations on the study and its characteristics; indeed, I believe that the authors should give a more clear and better organized description of what is the topic of the article and the actual knowledge to introduce the study. Please organize this part of the article so that it will be more clear.
2. The manuscript is written in a well way even if I found minor spell check that I think should be corrected:
 - Reformolute the abstract since there are too many ripetitions of the adverb "however" and the concept is not clear at all;
 - "Recruitment in a consecutive way: Jan 2018-Aug 2019 in 2 primary care centres & one outpatient clinic" Who???Please, rewrite this sentence.

Apart from correcting these points, I believe that the article should be published since its results provide the opportunity to deepen our knowledge of this topic.

Regards.
