1. The initials VO must be mentioned before the following paragraph: Vitreous opacities (VO), often known as floaters, are a frequent occurrence that is generally associated with a posterior vitreous detachment. They must be mentioned in: "Despite their prevalence, appropriate imaging and grading of vitreous opacities remain elusive"
2. You mention, "with recent research revealing that 87 percent of patients improved by at least three Early Treatment of Diabetic Retinopathy Study (ETDRS) lines at 12 months. (Gupta et al., 2012)". You should use an up-to-date reference, less than 5 years old.
3. This article aims to update on surgeries in vitreous opacities. There is a lot of reference to age of more than 15 years. It is recommended that you update those very old appointments.
