Dynamic International Prognostic Scoring System

National Cancer Institute

Source

National Cancer Institute. *Dynamic International Prognostic Scoring System*. NCI Thesaurus. Code C129683.

A time-dependent risk evaluation system for primary myelofibrosis that evaluates disease progression over time. This model includes age older than 65 years, hemoglobin level lower than 10 g/dL, white blood cell count more than $25 \times 10^9/L$, peripheral blood blasts equal to or higher than 1%, and constitutional symptoms in order to assign a patient to one of 4 risk categories.
