

# Review of: "[Perspective] Exploring the Synergistic Approach of Dual GLP-1 Agonist with Degludec Basal Insulin for Early Type 1 Diabetes Treatment for Albumin-Insulin Producing Cells Expression"

Balasekar Premkumar

Potential competing interests: No potential competing interests to declare.

The clinical study provides a useful information in type-1 diabetes research. It is also clearly highlighted the limitations, that the study is retrospective. Why the modification of GLP-1 agonists with albumin ligands was included, and it could be clearly described how it is related to this synergistic combination with degludec.
