

Review of: "Hospital's Thermo-neutral Zone for Patient Safety and Climate Change Sustainability"

Araceli Ávila

Potential competing interests: No potential competing interests to declare.

Dear authors, after reading your manuscript, I have the following observations:

1. The contribution of the article is not very clear.
2. The abstract should be improved.
3. A methodology must be added.
4. In the introduction section, the novelty of the manuscript, as well as the objectives, must be explained in detail.
5. The results of the investigation must be detailed.
6. References should be updated, and the most outstanding research should be mentioned.

In general, review and improve English writing.
