Devimistat

National Cancer Institute

Source

National Cancer Institute. *Devimistat*. NCI Thesaurus. Code C80039.

A racemic mixture of the enantiomers of a synthetic alpha-lipoic lipoic acid analogue with potential chemopreventive and antineoplastic activities. Although the exact mechanism of action is unknown, devimistat has been shown to inhibit metabolic and regulatory processes required for cell growth in solid tumors. Both enantiomers in the racemic mixture exhibit antineoplastic activity.
