Potential competing interests: Dear Editor-in-Chief I hope this message finds you well. I am writing to express my heartfelt gratitude for the opportunity to serve as a reviewer for your esteemed journal. It is truly an honor to contribute to the scholarly peer-review process. Thank you once again for entrusting me with this responsibility. I look forward to collaborating with you and the editorial team in ensuring the quality and integrity of the research presented in your journal. Best regards, Farshid Karimi In the Case Presentation section, more comprehensive information regarding pre- and post-operative evaluations can be included. For instance, quantitative measures of visual acuity, assessment of the patient's visual field, even if performed with qualitative tests such as confrontation tests or Amsler charts, or quantitative evaluation of visual fields using devices like the Humphrey Field Analyzer, especially the 24-2 and 10-2 types, can be significantly impactful. Has there been a change in intraocular pressure for this patient? Have pre- and post-operative OCTA tests been conducted to assess the anterior segment? Because the parameters evaluated by this device can be influential for the article's readers. Have colleagues specializing in glaucoma or optometry assisted you in the evaluations? Their names should be abbreviated when mentioned. Did these individuals possess the necessary expertise in this field? This is because recent articles have delved into eye surgeries in a more specialized manner and have presented commendable results. Below, I have provided an example of such articles that can serve as a template for enhancing the article: <https://doi.org/10.1007/s10792-021-02103-6> Has informed consent been obtained from the patient, and have the ethical aspects of the Helsinki Declaration been adhered to? If confirmed, please state. When selecting the surgical method, the success rate post-operation, the skill and expertise of the treating physician, and sometimes the use of combined methods can reduce post-operative complications in patients. Below, you can check some up-to-date articles in this field that can contribute to elevating the article: <https://doi.org/10.1177/11206721198793> DOI: 10.1097/IJG.0000000000001977 The article holds value, but a comprehensive review can enhance its quality. In some sections, it is necessary to provide more detailed information, and at times, valuable images of pre-and post-operative assessments can be added to the article.

Dear Editor-in-Chief
