Potential competing interests: No potential competing interests to declare.

This essay explores the relevance of critical thinking in research, an important aspect of achieving success in academic writing. The author highlights the purpose of critical thinking and details ways for its development, mainly in research. Also, it focuses on the relation between critical thinking and research thinking and the clues to integrate both.

I think the essay can be improved to give a deeper understanding of concepts:

- * It is important to increase the bibliographical sources to have a wider point of view of the phenomenon.
- * It is important to provide empirical evidence on this topic to understand how critical thinking influences research thinking.

The topic is very relevant to researchers and students looking to improve their research abilities.
