It is important work from a public health point of view, mainly because it is a food widely consumed by children, who are more susceptible to contamination and the development of non-communicable diseases, which are considered cumulative and silent. In relation to the references mentioned, more recent data should be sought on the estimation of pesticides (organochlorines) in the country, as the data is outdated. The correct writing of some units needs to be revised, especially those referring to volume (incorrectly written as ml). Petri is a proper noun and is written with a capital letter. In the text, there are citations that state recent data from studies in relation to pesticides are carried out. However, this is data from 2005 and 2006. Is this recent data?
