Review of: "Assessing students' attitudes and perceptions towards statistical literacy in a university system in a developing African country"

Edi Susanto[1]

1 Institut Teknologi Nasional (ITENAS)

Potential competing interests: No potential competing interests to declare.

Originality and Title: Good, there is still very little on Google Scholar that is closely related to the topic.

Scientific Quality: Good and relevant to the conditions of several developing countries in this topic.

Abstract: Compact

Introduction: Needs to add a little more context to the problems or issues faced by students at higher education institutions that relate to the conditions and competencies of lecturers and have met the standards

Method: Good

Results and interpretation: Assessing students' attitudes and perceptions towards statistical literacy is clear.

Policy and Managerial Implications are clear

Conclusion: Needs to add, "What does it mean if the results of research on these perceptions are that half of the students interviewed still consider statistics to be an important component in their training and future career paths," as a form of responsibility for lecturers, higher education institutions, and the government where this research was conducted?

References: Need to add literature in the last 3 years related to the development of this topic.
