The topic is interesting and written quite well. While the details of the WAI are given, it is important to add why it is used, summarize what the outcome is based on the results, and explain the impact on people. The title will give readers (who don't know what WAI is) the impression that it is a tool used by rehabilitation professionals.

In the spot where the range of scores is given, reference 2 given above 6.5 will give the impression that it is 6.5X6.5. It will be good to create a figure showing the range of WAI scores.
