Potential competing interests: No potential competing interests to declare.

1. The Introduction section of the research paper should define the problem identified in the present study, and its global and national significance by referring to the several research papers.
2. The authors have stated in the abstract that they have taken two study sites, please incorporate a section name 'study area' and explain its geographical boundaries with an appropriate map.
3. What kind of geo-spatial data has been used in the study, please also include a table showing their specifications.
4. Include a methodology flowchart, and a section on it and explain the techniques used in the study.
5. Under results, show the outcome of the study for two different sites and also through different methodologies.
6. Based on the results from the study, discuss about how to safeguard the heritage in climatically marginal landscapes.
