Potential competing interests: No potential competing interests to declare.

Comments :

Some terms like "Thinkercad" are most likely to be "Tinkercad." Ensure consistency in spelling and terminology.

A description of the components is provided, however, the functionality of the components and how they contribute to the system can be explained more clearly.

Proofreading for grammatical errors is required.

Potential challenges for implementing the system in a real-world scenario, such as scalability, maintenance, and integration with existing infrastructure, require consideration.

On the whole, this article looks more like a project description rather than a research article.
