Dear,

Extremely relevant to the topic and a very good approach, given that we currently have approximately 2 billion Muslims around the world and that many know that one of the 5 pillars of the religion is the hajj. In conclusion, I could briefly address what measures can be taken by both the pilgrim and the Saudi government to minimize the pathology and even deaths as a result. Be careful with the abbreviations that must be used after having been cited in full. And finally, I could address the pathophysiology in more detail to give robustness to the topic. What additional details on pathophysiology would strengthen: Mechanisms of Hyperthermia; Fluid and Electrolyte Imbalance; Inflammatory Response; Impact on Organs; and Genetic and Environmental Factors. Preventive Measures for the Saudi Government: Medical Facilities and Personnel; Awareness Campaign; Hydration Stations; and Coordination with Local Communities. Congratulations on the text.
