# WAC wt Allele

National Cancer Institute

## Source

National Cancer Institute. *WAC wt Allele*. NCI Thesaurus. Code C134035.

Human WAC wild-type allele is located in the vicinity of 10p12.1 and is approximately 91 kb in length. This allele, which encodes WW domain-containing adapter protein with coiled-coil, plays a role in both DNA damage responses and chromatin remodeling. Mutation of the gene is associated with Desanto-Shinawi syndrome.
