Potential competing interests: No potential competing interests to declare.

- The paper needs a major revision; it presents a lot of typos and grammar mistakes.

- The abstract needs to be rewritten; it is not concise, and the objective of the article is not clear.

- There is no proper analysis of the results; some figures are presented, but no interpretation is given.

- There is no explanation of how the presented result improves existing results.

- Explain which software you are using for the numerical examples; it is not mentioned in the manuscript.
