Potential competing interests: No potential competing interests to declare.

The empirical and theoretical approaches of the study are explained well. Even though there are studies in the literature, this study also contributes to the literature by considering the macroeconomic variables selected in the study. Moreover, the structure and the language of the study are also good enough for publication. I recommend that one sentence to indicate the importance of the topic seems needed in the abstract as the first sentence. Overall, I confirm the study for publication.
