Dear Dr. Stanley K. Kirika,

After carefully reviewing your manuscript, the following comments will improve the quality of the manuscript

1. The structure throughout the paper needs to be simplified to ensure clarity and comprehensibility for readers. It is recommended that each chapter be thoroughly revised to ensure fluency, relevance, and logical flow between sections.
2. This paper uses economic system rationality entropy to measure resilience by examining 13 country habitats for more than half – 4.063 billion of the world's population. But there is no explanation as to why 13 economies are representative of the global economy.
3. What is the connection between entropy and toughness? Relevant content needs to be added to the manuscript
