

Review of: "Antimicrobial Sensitivity of Plant Extracts of *Acacia arabica*, *Prosopis juliflora*, *Abutilon indicum*, and *Bryonia laciniata* on *Staphylococcus aureus*, *Pseudomonas aeruginosa*, and *Escherichia coli*"

Dr. Bilal Ahmad Ghalloo

Potential competing interests: No potential competing interests to declare.

On which basis these four plants are selected from their respective families for the study?

For antibacterial study, there should be MIC or IC50 values. Only zone of inhibition does not give the clear idea.

The discussion is weak. The results should be properly discussed with justification and reasoning.

The identification of plants is missing.

What concentration of plant samples are used for zone of inhibition?

This paper needs thorough revision for English language.
