Potential competing interests: No potential competing interests to declare.

Manuscript entitled prevalence of Buruli Ulcer among Residents in Jasikan Municipality: A cross-Sectional Study has provided important information for the health care system to control Buruli Ulcer. However, in order to publish this manuscript the authors need to make major revision.

Comments

1. Abstract: Result part need elaboration rather than one sentence
2. Study site: In second paragraph the sentence "The Municipality has a sex ratio of 91.9". is not clear and confusing. What does mean by 91.9 sex ratio
3. Study Population: why authors exclude residents with wounds who were seriously ill?
4. Results: In table 1 under variable age there was categories of 0-20, how the participant with 0 age can be respond to interview?
5. Results was not well describe, rather presenting in table form
