**Potential competing interests:** No potential competing interests to declare.

The manuscript demonstrates a commendable effort in addressing the multifaceted aspects of the water-energy nexus. With some structural refinements and visual enhancements, it has the potential to serve as a valuable resource for researchers and policymakers in the field.

-While the manuscript is rich in information, ensuring a clear and cohesive structure could enhance readability. Consider subheadings or thematic divisions to guide readers through the diverse topics.

-A more explicit conclusion summarizing key findings and suggesting potential future directions for research or policy development would bring closure to the comprehensive exploration.

- The inclusion of visual aids, such as figures or tables summarizing key data points or methodological frameworks, could assist in conveying complex information more effectively.

- Some sections exhibit language and grammar issues. A thorough proofreading is recommended to ensure clarity and precision in the presentation of ideas.
