Potential competing interests: No potential competing interests to declare.

1. The introduction is very well written, clearly highlighting the need of the study.
2. Why only age group 3 to 5 years is selected?
3. This index can be generalised for higher age groups?
4. The detailed step-wise implementation of FDM and AHP should be given for better understanding of the procedure adopted. for example, 3-level hierarchy should be presented in AHP and many such steps are missing.
5. Limitation and future directions of the current study are missing.
