You mentioned a new entity and title due to COVID-19 disease, and it is interesting. we have such experience in Iran, especially in patients with autoimmune problems. In addition, we have had chronic fatigue syndrome after mRNA-based vaccination. Is it clear in your article that the cause of patients' fatigue is due to lung involvement caused by COVID or anemia caused by chronic diseases or iron deficiency, etc. not? Does your article discuss the severity of COVID disease, the need for ventilation, the duration of COVID treatment for each patient, and whether the patients were vaccinated or not?

I look forward to reading your published article.
