Potential competing interests: No potential competing interests to declare.

For an overall evaluation, I consider the paper well-written and much of it well described. Therefore, this work is a good contribution to the scientific community. But, before accepting it, some revisions are necessary.

- Authors must spell "*Moringa oleifera*" correctly throughout the text (italics, only the first word beginning with a capital letter).
- In at least the first mention of *Moringa*, the author must include the first author to describe this plant (*Moringa oleifera* Lamarck or *Moringa oleifera* Lam.).
- In the first paragraph of the introduction, recent data (last three years) on infertility is required.
- In table 01, it is important to use the same number of significant figures in the data. For example,  $17.88 \pm 9.28$  should become  $17.9 \pm 9.28$  to maintain 3 significant figures. The same suggestion applies to table 2.
