2:1 Atrioventricular Block by ECG Finding

National Cancer Institute

Source

National Cancer Institute. *2:1 Atrioventricular Block by ECG Finding*. NCI Thesaurus. Code C71044.

An electrocardiographic finding of a supraventricular rhythm where the ratio of impulses generated above the atrioventricular node to the number of impulses conducted through to the ventricles is 2:1. This is manifested on the ECG as 2 P waves per QRS complex. (CDISC)
