Potential competing interests: No potential competing interests to declare.

The manuscript, "Investigation of the properties of the composition obtained based on mixtures of polyvinyl chloride ", has many shortcomings:

1. I am really unable to decode the novelty aspect of the manuscript. I would request the authors to clearly demonstrate the novelty of the study.

2. It is noted that the manuscript needs careful editing by someone with expertise in technical English editing paying particular attention to English grammar, spelling, and sentence structure so that the goals and results of the study are clear to the reader.

3. The introduction of this manuscript is too short, so the author should be widened.

4. The figures and table 1 are not clear, it should be revised.

In my opinion, the current manuscript "**Investigation of the properties of the composition obtained based on mixtures of polyvinyl chloride**" should not be consider for publication in its current form.
