

Review of: "Investigations on Input Impedance and Radiation Pattern of a UWB Antenna for Microwave Imaging"

Kavitha Narayanasamy

Potential competing interests: No potential competing interests to declare.

1. The application for which the proposed design is made shall be provided in the initial portion of the Abstract.
2. A flow of concepts, procedures, and results must be followed in the abstract.
3. The objective of the paper is not clearly stated in the abstract. The manuscript presents a general explanation of the applications instead of a comparative discussion of literature based on the design and results.
4. Section 4 is just a compilation of the results obtained. A technical explanation is required in each discussion.
5. The quality of all images is very poor.
