

# Review of: "Determining Appropriateness of Antibiotic Therapy in Nursing Home Residents: A Review"

Arianit Jakupi

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

Very interesting approach however I have two small questions:

1. In the introduction part – “Third, unnecessary antibiotic therapy can result in adverse drug reactions, *C. difficile* infection”
  1. Why only *Clostridium* is mentioned, there might be also other types?
  2. maybe to check also for the AWARE system of WHO. This could be interesting to see also for the discussion part on the selection of antimicrobial therapy.
