The topic, "A Study for Estimation of Greenhouse Gas Emissions of Cotton in Central Greece" is quite interesting and timely. The author demonstrates a very good knowledge of the subject matter.

The authors used a combination of research methods to get primary data, including interviews and questionnaires.

The authors can elaborate in the introduction section for climate change mitigation so that to give more holistic view on the ground of which the current research stems from.

Overall, the authors ought to focus on the results and discussions. Also, please compare the findings of the study with the findings of other studies.
