Potential competing interests: No potential competing interests to declare.

The present research deals with an interesting association between Insomnia and Online gaming addiction. However some of the points need to be clarified for enhancing the scientific acceptability of the research as-

1. Title may be changed as "The Association Between Insomnia and Online Mobile Games Addiction among Adolescent School Children in the East Luwuk of South Sulawesi, Indonesia"
2. As the current research was not based on recommendation part, therefore, if possible, delete the last recommendation parts from the abstract. Additionally, what about the parent's role in order to restrict mobile gaming?
3. In introduction- references will be required for 3rd Paragraph
4. As the preliminary observation was the part of current research, then put the last paragraph narratives in the discussion section of the article.
5. In methods- put the formula of sample size calculation and also put a flowchart of sampling.
6. What about the other associated predictors of Insomnia? In order to establish the association between Insomnia and Mobile games addiction, we have to control the other related covariates.
7. How duration of daily gaming has been made upto 1 hour? explain in method section.
8. In Table 2, Kategori should be Categories of Insomnia. Besides, First, authors should give full categories then clump them and it should be furnished in the methods section.
9. What about the Ethical Approval of the current research?
10. If possible, put two or three case studies here.
11. If the authors have considered and collection other associated covariates, then multivariate logistic regression will be given more specific outputs
