

Review of: "Analysing the conglomeration of various urban pockets through the lens of environmental design for crime prevention: A case of Kolkata"

Parama Mitra

Potential competing interests: No potential competing interests to declare.

The research is robust and original.

However the abstract initially aims to to a ward level study and concludes on a typology of buildings of Kolkata- the dalan style. This is unclear.

Whether the responses on the parameters selected for the study was based on researcher's observation or through user opinion or both is unclear.

the Conclusion needs to be rewritten and the mentioned clarifications need to be given for making the work better.
