

# Review of: "A Review of the Risks of Copper Foil Manufacturing Plants. A New Facility in Catalonia, Spain"

Lehua Zhang

Potential competing interests: No potential competing interests to declare.

1. The title of each section is very broad, but the depth and amount of information is very little.
2. In this paper, the data, pictures, and tables of others are rarely cited to enhance the discussion in the article.
3. The focus of the article is not concentrated enough, and the structure is very loose, hoping to focus in one direction.
4. In the introduction, there are many background contents, and it is hoped that it can be properly streamlined and problem-oriented to deepen the logical thinking.
5. The genre of the manuscript needs to be further revised, not like a scientific review, but more like a report, with more relevant culture and background introduction.
6. There are too few references cited in the introduction. Please increase the number of references cited.
7. The conclusion part is not refined enough. The content of the manuscript should be deepened and understood, and the future development and direction should be evaluated.
