**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The authors studied the material of MXene based textile for EMI shielding with a period of 2018-2022. They have presented an interesting review of certain valuable insights, health effects of EMI, multifunctional applications of the same coated material on textile from the various literature, and some challenges. In conclusion, they found that nano related materials like MXene based textiles exist only in the lab- scale and starts-ups. This review may be useful to the readers or researchers for future research in textile. The manuscript, has written with acceptable language quality. Accordingly, I suggest the manuscript to be accepted for publication in the Qeios.
