Good article. I agree to publish it after adding and modifying references.

You mentioned the reference as [3] in the background and did not include it.

According to the World Health Organization (WHO) fact sheet on epilepsy, the risk of premature death in people with epilepsy (PLWE) is three times that of the general population, while more than 70% of people with epilepsy could survive if diagnosed and treated correctly [3].

Edit the date in the reference (Harborne (2013)) to match what was written on the references page at the end of the article.
