**Potential competing interests:** No potential competing interests to declare.

The paper presents a review of the modelling of a 7 kg payload quadcopter and presents simulation results of the same.

The manuscript needs further polishing in terms of:

1. Addition of recent publications and correlation to the current work.
2. The mathematical formulation is very basic and does not contribute much to the scientific community.
3. The results and discussion section of the article has to be significantly improved.
