

Review of: "Revitalizing Key Conditions and Integrated Watershed Management Approach to Sustain Water Availability and Agriculture in Semi-Arid Regions"

Fenil Gandhi

Potential competing interests: No potential competing interests to declare.

Integrated watershed management represents a promising framework for safeguarding ecosystems and enhancing livelihoods. Signifying progress in soil and water conservation, this approach lays a foundation for sustainable practices. While facing challenges like institutional gaps and limited participation, the focus on robust institutional support, resource management, and scientific integration offers a beacon of hope. By integrating these elements, the approach shows great potential in ensuring lasting water availability and agricultural sustainability, especially in semi-arid regions. This positive trajectory underscores the opportunity to fortify integrated watershed management for a more sustainable future.
