Potential competing interests: No potential competing interests to declare.

1. Latest literature survey section must be added.
2. Novelty of the proposed work is not properly justified.
3. Suggested to include some graphical analysis.
4. Results and discussion need to be more elaborative.
5. Include some latest references in the reference section.
6. Comparative analysis/summary of results must be there.
7. A suitable diagrammatic flow is desirable to represent the entire work.
8. Why authors have used the said methods only, a suitable background or comparative table is required.
9. Equation symbols should be explained carefully. Better to present a Table of Nomenclature.

The author should use some statistical measure to present the results in a more efficient manner.
