Potential competing interests: No potential competing interests to declare.

1- IoT must be included in the title because the author defined and introduced the Internet of Things within the text.

2- Where is the aim of the paper and the method used in the abstract?

The abstract must have the aim of the paper, which is the research problem to be resolved, and the research method with the expected results.

3- The related work must be briefly reduced. All the results must be combined in one section, including the definition of each study briefly.

4- The paper has no research method, algorithm, or any methodology; it is like a report with theoretical basics. The blockchain technology used in this study must be specified in algorithms or steps, and what are the advantages you obtained.

5- It is not a paper that has a problem, a research method to solve the problem, and results. Where are the results?
