## Comment

1. In the abstract, it should be explained that this research is a qualitative or quantitative research method. Furthermore, it is clarified how the form of economic digitalization must be understood by SME business actors in Malaysia
2. In the first part (introduction), it is better to display some reviews of the digitalization of the SME economy in other countries, so in the last paragraph the form of SME digitalization in Malaysia is offered, so that there is renewal from researchers
3. It is advisable to add some research results to the 2022 digital economy adoption literature review and the benefits of the digital economy
