**Potential competing interests:** No potential competing interests to declare.

1. Setup details are required for Figures 3, 4, and 22.
2. Components used are not specified properly. More details are needed. Few components are overexpressed with more details such as ATMEGA; reduce the text for the same.
3. Some graphical representation of tabular data helps to boost the understanding of the results.
4. Specific outcomes and their problem definitions are not found in the paper. Authors need to redefine the problem statement and work upon it to get improved results.
