

Review of: "Neutronic Chain Reactions for Polonium-210 Production"

Nicholas Lim

Potential competing interests: No potential competing interests to declare.

Based on the article "Neutronic Chain Reactions for Polonium-210 Production," the author Solomon Lim provides a detailed characterization of the nuclear reaction involved in the production of Polonium-210. The article is well-written and concise, and it could be a valuable resource for researchers and professionals working in the field of nuclear science and technology. The author discusses the potential applications of this new method for Polonium-210 production, which is an industrially significant radionuclide. Overall, the article appears to be a valuable contribution to the field of nuclear science and technology.
