Hello,

Thank you for the opportunity to review the manuscript, "Elderly social connectedness through social media platforms: a scoping review". There are a few minor areas that would benefit from revision.

Abstract: Introduction has contain general information with long sentences and don't congruent with the topic study.

Introduction: The content is long some and only reporting and reviewing texts were without discussion. The stated gap in the reviewed literature isn't convincing. Based on what documents and reasons have you stated this sentence "Unfortunately, studies demonstrating the concerns of the elderly population..." ? The last sentence of the last paragraph in the introduction is not relevant to this section[introduction], delete it "The findings of this study provide..." .

Research design :thank you for method of research design by utilizing " scoping review" (it is presented right).

Results: unfortunately it is not complete presented.

Discussion: Findings were not compared and analyzed with other findings (identical or divergent), Only were reported. The results of this study were not compared and analyzed with other studies of African countries.

References: This article has many references (60!) and few of them are not strong.

With best regards

Anoosheh
