Review of: "Multiscale Entropic Ethics: A Non-Scalar, Auditable Grammar for Decision-Making Under Irreversibility"

Ivan Vasquez¹

1. Law Studies, Universidad Nacional Autónoma de México, Mexico

This article offers an innovative and rigorous approach to ethical decision-making in complex, irreversible contexts. By integrating multiscale perspectives and emphasizing transparency and auditability, it provides a valuable framework that moves beyond reductionist models. Its commitment to plural evaluation and safeguarding against bias makes it a forward-thinking contribution to ethics, governance, and sustainability.
