Potential competing interests: No potential competing interests to declare.

Following are some comments that the authors may consider addressing to enhance the text:

1. **Clarify the Research Methodology:** The authors should provide a detailed description of the research methodology, including the sampling techniques, data collection methods, and any limitations of the study.
2. **Expand on Mitigation Measures:** The article mentions practical measures and solutions to mitigate the negative impacts of dredging, such as responsible dredging practices and habitat restoration efforts. The authors should provide a more comprehensive discussion of these measures, including specific examples and case studies where applicable.
3. **Incorporate Comparative Analysis:** To strengthen the article, the authors could consider including a comparative analysis of similar studies or projects in other coastal areas to provide a broader perspective on the impacts of dredging and the effectiveness of mitigation measures.
4. **Address Stakeholder Involvement:** It would be beneficial for the authors to discuss the involvement of relevant stakeholders, such as local communities, government agencies, and environmental organizations, in the decision-making process related to dredging activities and mitigation efforts.
5. **Discuss Policy Implications:** The authors may consider discussing the policy implications of their findings, including recommendations for regulatory frameworks, environmental impact assessments, and sustainable coastal management practices.

By addressing these points, the authors can enhance the comprehensiveness and applicability of their research, contributing to a more robust and impactful article.
