Review of: "Impedance of a Hydrogen–Fed SOFC Anode: Analytical and Numerical Models Based on the Dusty Gas Transport Model"

Thomas von Unwerth¹

1. Technische Universität Chemnitz, Germany

- a. Many grammatical errors need to be corrected.
- b. Cite more current publications; there are many younger ones that already show results on the topic you're describing. Actually, underline with more and newer literature to research the new research insights from your work.
- c. At least give a reason for not taking into account the perturbation term or give some error analysis and discussion.
- d. Describe in more detail how your work influences the research topic and what's actually new. Specify more clearly the importance of this work for the research field.
- e. Give a more detailed outlook on how your results may be a starting point for new and further research work.
