Potential competing interests: No potential competing interests to declare.

“That historic prospect explains why Einstein gave light such a dominant role, notwithstanding his first principle encompasses all physical laws.” – modify to

This historical perspective explains why Einstein gave light such a pre-eminent position, notwithstanding the fact that his first principle governs all physical laws.

Homogeneity of time requires that the ratio dt'/dt (*replace the latter by partial derivatives*).

I would like the author to summarise the work of Verheest to the extent needed at the beginning of section II. Then, this document will be self-contained and readable. Otherwise, only those with subscription to AmJ of Physics and sufficient motivation will read this article.

Otherwise, this article is useful pedagogically, and if the author adds enough material to make it self contained, publishable.
