

# Review of: "From Complex to Real Numbers: A Reverse Detour for Solving Polynomial Equations Using Complex Numbers"

Shaymaa Shraida<sup>1</sup>

<sup>1</sup> University of Baghdad

Potential competing interests: No potential competing interests to declare.

- **The abstract needs rewriting. For example, (The formulation of the method and application of the formulae based on the roots of complex numbers is simple and intuitive to follow.) You can write it like (Formulating the method and applying the formulae based on the roots of complex numbers is simple and intuitive to follow.)**
- **It would be better if you could use some new references.**
- **For the methods: Do not say every single step, (say just the important ones).**
- **In the conclusion, there are some word mistakes, like (discriminant) should be (discrimination ).**
